NFPA-20 Submittal Packet

NFPA13R Packaged Fire Pump System UL/FM Fire Pump

## 13-ULV50-R

Compact Residential Package Design Condition: 50GPM @ 85PSI

#### System Specifications:

Motor

- -10 Horsepower Electric
- -230 Volt, 46 Amp
- -Single Phase
- -3450 RPM

#### Pump

- -UL/FM Vertical Inline Fire Pump
- -2" Suction (FNPT)
- -2" Discharge (Grooved)
- -175 PSI max working pressure

#### System Components (UL Listed by Manufacturer)

- -1- Limited Service Fire Pump Controller
- -2- Electric Motor (UL Recognized)
- -3- Discharge Butterfly Valve (Monitored)
- -4- Test Connection Butterfly Valve (Monitored)
- -5- Check Valve
- -6- Vertical Inline Fire Pump
- -7- Suction OS&Y (Monitored)

#### Dimensions

- -33" Depth
- -78" Height
- -32" Width

<sup>\*</sup>All dimensions are approximate and subject to change without notice.

NFPA13R Packaged Fire Pump System UL/FM Fire Pump with Jockey Pump

## 13-ULV50

Compact Residential Package Design Condition: 50GPM @ 85PSI

#### System Specifications:

Motor

- -10 Horsepower Electric
- -230 Volt, 46 Amp
- -Single Phase
- -3450 RPM

#### Pump

- -UL/FM Vertical Inline Fire Pump
- -2" Suction (FNPT)
- -2" Discharge (Grooved)
- -175 PSI max working pressure

#### System Components (UL Listed by Manufacturer)

- -1- Limited Service Fire Pump Controller
- -2- Electric Motor (UL Recognized)
- -3- Discharge Butterfly Valve (Monitored)
- -4- Test Connection Butterfly Valve (Monitored)
- -5- Check Valve
- -6- Vertical Inline Fire Pump
- -7- Suction OS&Y (Monitored)
- -8- Pressure Switch (Jockey Control)

#### **Dimensions**

- -33" Depth
- -78" Height
- -34" Width

<sup>\*</sup>All dimensions are approximate and subject to change without notice.

13-ULV50 50GPM @ 85PSI 10HP UL/FM VERTICAL INLINE FIRE PUMP

# Fire Pump Controller

# **Eaton EPCT Fire**

Touchscreen based electric fire pump controllers

#### **Product Description**

The EPCT Fire features an advanced, 7" color touchscreen that incorporates both the fire pump controller (FPC) and automatic transfer switch (ATS) functionality into one, intuitive display.

Designed solely with the consumer in mind, the EPCT Fire enables technicians to commission the fire pump controller faster; troubleshooting is made easier and is more effective through the use on-screen history filtering and diagnostic monitoring.

All full-service fire pump controllers can be offered in either full-voltage or reduced voltages starting methods:

- FD/FT20 Limited service
- FD/FT30 Across-the-line
- FD/FT40 Part winding
- FD/FT50 Primary resistor
- FD/FT60 Autotransformer
- FD/FT70 WYE-Delta (Star-Delta) open transition
- FD/FT80 WYE-Delta (Star-Delta) closed transition
- FD/FT90 Soft start

#### **Product Features**

#### **Touchscreen Display**

#### General

Speed of commissioning, configuration and troubleshooting are more critical to businesses today more than ever. Through the use of a 7" touchscreen, users can easily program all site specific setpoints through an intuitive menu structure, view all critical system information, and troubleshoot quickly and accurately via on-screen diagnostics.

#### Automatic Transfer Switch Integration

Going away from the multiple screen approach, the EPCT Fire touchscreen integrates both the Fire Pump Controller and Automatic Transfer Switch into one display enabling the user to effectively manage programming and operation from one source.

#### Commissioning Simplified

The Startup tab features all controller related commissioning tasks such as: Quick Setup, Setup Phase Reversal, Flow Test, Manual/Automatic Starts, and Test Alarms.

#### **UL Type Rating**

The touchscreen display has been tested in accordance with UL and achieves a type 4X rating.

#### **Programming Menu**

#### Startup tab

This tab system enables the user to complete all controller related commissioning tasks. Each sub-menu within the Startup tab guides the user through step-by-step, intuitive screens to quickly and effectively complete the startup and commissioning process.

#### Panel Setup tab

All variables relating to the panel, such as language, date and time, nominal voltage, etc., are located in the Panel Setup tab. For all programming points within the Panel Setup tab, refer to the instruction manual: MN124016EN.

#### Help tab

The help tab provides end users service contact information from the company that commissioned the unit (if programmed), factory contact information, and a QR code to download the instruction manual onto a mobile device.

#### Pressure Settings tab

Contains a variety of pressure settings that may be programmed to suit site requirements. Some key settings include: Start Pressure, Stop Pressure, Low Pressure Alarm, High Pressure Alarm, Low Suction Shutdown, Low Foam Shutdown, Pressure Units, and the ability to calibrate the transducer.

#### Timer Values tab

This tab system contains the programming point for all fire pump controller related timers. These timers are: Minimum Run Time, Acceleration Time, Sequential Start Time, Fail to Stop Time, and Weekly Motor Test Timer.

#### ATS Settings tab (if equipped)

The ATS Settings tab will only be enabled on units equipped with an automatic transfer switch. Programming points within this tab only pertain to the operation of the transfer switch.

#### Alarm Setpoints tab

There are seven (7) programmable alarm points within this tab system: Phase Reversal, Phase Failure Alarm Setpoint, Motor Overload Setpoint, Transducer Fail Pump Start, Abort Motor Test on Low Voltage, Voltage Alarm Settings, and Frequency Alarm Settings.

#### Inputs/Outputs tab

The I/O board is capable of accepting ten (10) custom inputs that can be programmed for seventeen (17) predefined conditions. The output relays can be programmed for sixty-one (61) separate conditions. Additional relays can be added through the use of a single or multiple optional relay boards.

#### History/Statistics/Diagnostics tab

This tab system allows the customer/technician to view historical data, controller statistics, controller diagnostics, and startup information. To assist, the controller can filter for specific events or between certain dates to speed up troubleshooting.

#### I/O Board

#### Power Supply

The redesigned I/O board is equipped with a full voltage power supply capable of accepting voltage inputs between 200-600VAC three phase, or 240VAC single phase.

#### Customer Input Connections

Connection terminals are provided at the top of the I/O board for external customer connections that can be programmed through the touchscreen display.

#### Output Relays

The I/O board features four (4), 250VAC, 8A, 2 Form-C relays designated for the following: Common Alarm, Power/Phase Failure, Phase Reversal, and Pump Run. Each relay socket has a surface mount LED to indicate the relay's coil status.

#### Optional Boards

The controller can accept up to four (4) additional option boards: optional relay board, MODBUS communication board, secondary 4-20mA device board, and an alarm board. The controller has provisions to allow future optional boards to be added with plug-and-play functionality.

#### **Other Components**

#### Drain Valve Solenoid

All full-service EPCT Fire controllers are equipped with a drain valve solenoid used for manual or automatic motor tests.

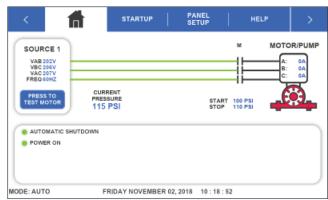

#### External USB Port

The USB port allows the user to download historical messages, statistics, diagnostic information, startup file, and current controller configuration to any USB device with FAT16 or FAT 32 formatting.

#### **Enclosures**

The EPCT Fire controllers come standard with UL type 2 (drip-proof) enclosures. Optional enclosures are available and include: type, 3, 3R, 4, 4X, and 12.

#### **Display Screens**

Home tab - without ATS

**Common Alarm Settings** 

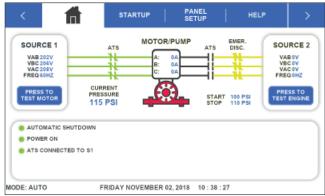

Message History

#### **Emergency Start Operator**

A mechanically operated emergency start handle (ESH) will mechanically activate the motor contactor(s) independently from any electrical control circuits.

#### **Standards & Certifications**

All EPCT Fire full-service, electric fire pump controllers meet or exceed the requirements of Underwriters Laboratories and Underwriters Laboratories Canada [UL218 and UL1008], Factory Mutual, the Canadian Standards Association, New York City building code, CE mark, U.B.C./C.B.C. seismic requirements, and are built to the latest edition of NFPA 20 standards. The EPCT Fire electric fire pump controllers are suitbale for use as service entrance equipment - does not meet CEC requirements for Canada.

Specify pressure settings J99

1 Specify Class 9013 Type G.

2 Select pressure code and add code designation to end of type number. Be sure that pressure code falls within the limits of the device as shown in the device listings.

- 3 If special features are desired, add the appropriate Form letter to the Class and Type. Arrange Form letters in alphabetical sequence when ordering more than one special feature.
- 4 Place packaging code at end of sequence with other forms when ordering. If no packaging code is indicated, devices will be shipped individually packaged.

For standard pack of 10 devices per box C10 Available on GHB, GHG, GSB, and GSG

See page 25 for Form C10.

# Valves & Fittings

## **Fire Main Gate Valve**

## **OS&Y Valves (Outside Stem & Yoke), RS**

## **Description**

FPPI OS&Y Valves feature a bronze\* body (ASTM C83600) cast iron hand wheel, with steel, stainless steel, and brass components for extended service life. OS&Y valves (outside stem and yoke) are perfect for sprinkler system monitoring. When the valve is opened, the stem is visible above the hand wheel. In the closed position, the stem is concealed inside the valve body. This allows for immediately identifying if the valve is "OPEN" or "CLOSED". OS&Y valves can also be fitted with external tamper switches for central station or panel monitoring.

### Installation

Install in accordance with customary installation practices.

The information contained herein is produced in good faith and is believed to be reliable but is provided for guidance and information purposes only. FPPI and its agents cannot assume liability or responsibility for results obtained in the use or misuse of its product by persons whose methods and qualifications are outside and beyond our control. It is the user's responsibility to determine the suitability of, methods of use, preparation prior to use, and appropriate installation for all products purchased from FPPI. It is the user's sole responsibility to observe and adapt such precautions as may be advisable or necessary for the protection of personnel and property in the handling and use of any of our products.

\*Contains lead. Not for use in water systems intended for human consumption.

Stock No. 1010201

#### UL and cUL Listed, FM Approved, CSFM Listed, NYMEA Accepted

**Dimensions:** 7" L x 3.75 W x 3" D (including bracket)

(17,7 cm x 9,5 cm x 7,6 cm)

Weight: 13.6 oz. (385,5 g.)

Enclosure: Non-Corrosive Composite Material

#### **Environmental Limitations:**

- NEMA 4 and NEMA 6P rated enclosure when proper electrical fittings are used. (IP67)
- Temperature range: -40° F to 140° F (-40° C to 60° C)

**Housing Cover Tamper:** Activated by housing cover removal.

Contact Ratings: SPDT Plug Contacts: 100 mA at 28 VDC/AC

250 mA at 12 VDC/AC

SPDT Cover Tamper: 250 mA at 28 VDC/AC

Cable: 2-wire, 18 Ga. Waterproof - Approx. 8' (2,43m) long

#### General

The Model PTS-C is designed to supervise sprinkler system control valves and may also be used to secure gates and other applications. This unit is particularly useful for unusual conditions, such as non-rising stem valves.

Nema 6P enclosure allows the device to be mounted outdoors, even in areas subject to flooding such as pits and wells. Sealed reed switch operation virtually eliminates contact corrosion.

Turning the valve wheel will pull the plug out of the receptacle. The plug cannot be reinserted after operation until the plug receptacle cover is removed with the special hex key provided. This key should be left with the building owner or responsible party. Replacement or additional cover tamper screws and hex keys are available. For cover tamper screws, order stock no. 5490344. For hex key, order stock no. 5250062.

#### Installation

PRINTED IN USA

Insert plug into housing, take the loose end of the cable and loop it through the valve handle and into the housing. Adjust the length of cable so the plug must be pulled from the housing when the valve is closed. Cut off excess cable and terminate on the plug terminals of the PC board. Do not leave more than 2" (50mm) of excess wiring in the housing. Dress wires to outside edge of housing so as not to interfere with cover tamper.

#### Wire Checkout

With the plug wired to the two P terminals and the plug inserted fully into the receptacle, place an ohmmeter across the C and N.O. terminals. The meter will show Open. Unplug the plug from the receptacle. The meter will show continuity.

*Note:* The two P terminals will always show continuity when the plug is connected regardless of whether the plug is inserted or not.

The cover tamper switch can be wired into the plug circuit or wired as a separate circuit. (See wiring diagrams.)

#### Testing

The PTS-C and its associated protective monitoring system should be tested in accordance with applicable NFPA codes and standards and/or the authority having jurisdiction (manufacturer recommends quarterly or more frequently).

## **A** CAUTION

Be sure valve is fully open before restoring PTS-C.

#### WARNING

#### As Stipulated By Factory Mutual And Underwriters Laboratories

This unit is not intended or designed for ordinary use. It is a special application device to be used for unusual conditions such as non-rising stem gate valves where no other approved or listed method of protection is available or practical. As this unit does not meet NFPA codes and standards, requiring restoration signal when the valve is positioned to normal, special attention should be given by the responsible parties to assure that the proper operation of this device is maintained. This device should only be restored to normal when the valve is in the normal condition.

## **TrimFit® Bronze Butterfly Valve**

# INSIST ON EPP P 1

## **Installation Instructions**

## **Description**

TrimFit® Model BFT (Threaded Butterfly Valve) and Model BFG (Grooved Butterfly Valve) close slowly to prevent water hammer. The butterfly valves are designed to be installed in any orientation and monitored to signal if the valve is opened or closed. They are Listed and Approved for use in a fire sprinkler system.

### Installation

- 1. The valve can be installed in any orientation in a piping system with standard ASME B1.20.1 NPT or standard roll or cut grooved pipe.
- 2. When threading to pipe, apply PipeFit® or equivalent thread sealant or tape.
- 3. Use a wrench to cramp on the hexagon end of the valve.
- 4. The tamper switch features two switches: Switch-1 has dual leads on the terminals. This switch is used for connection of the supervisory circuit of a listed fire alarm control panel. Switch-2 has a single lead. This switch is used for connection of auxiliary equipment.
- 5. All the unused wires need to be capped with lead nuts and tucked into a junction box.
- 6. All connections need to be reviewed and approved by the appropriate jurisdictional authorities.

- 7. A No. 14 green wire is fixed inside the switch housing. It is provided as a ground for the housing.
- 8. The valves are intended for use with ANSI B36.10 Schedule 40 and/or Schedule 80 pipes, sizes 1",  $1-\frac{1}{4}$ ",  $1-\frac{1}{2}$ ", 2" and  $2-\frac{1}{2}$ ".

NOTE: ALL REPLACEMENT PARTS
MUST BE OBTAINED FROM THE
MANUFACTURER TO ASSURE PROPER
OPERATION OF THE VALVE, AND TO
MAINTAIN APPROVAL OF THE DEVICE.

The information contained herein is produced in good faith and is believed to be reliable but is provided for guidance and information purposes only. FPPI and its agents cannot assume liability or responsibility for results obtained in the use or misuse of its product by persons whose methods and qualifications are outside and beyond our control. It is the user's responsibility to determine the suitability of, methods of use, preparation prior to use, and appropriate installation for all products purchased from FPPI. It is the user's sole responsibility to observe and adapt such precautions as may be advisable or necessary for the protection of personnel and property in the handling and use of any of our products.

#### Valve Handle Lockout Covers

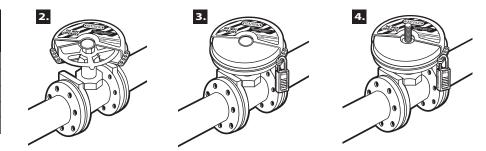

1.

Product Number Modèle n° Modelo Núm.	For Valve Handle Diameters Diamètre du volant de manœuvre Para diámetros de manija de válvula
480	1 in 3 in. (25 mm - 76 mm)
481	2 in 5 in. (51 mm - 12.7 cm)
482	4 in 6.5 in. (10.2 cm - 16.5 cm)
483	6 in 10 in. (15.2 cm - 25.4 cm)
484	8 in 13 in. (20.3 cm - 33 cm)

- Select the properly-sized cover for the specific valve handle to be locked out. Note: Cover should be loose enough when applied that it does not bind to the valve handle.
- Rotate the lockout cover to completely surround the valve handle (Illustration 2).
- Secure with Master Lock safety lockout padlock(s) by inserting shackle(s) through the overlapping locking eyelets (Illustration 3).
- To secure a valve handle which has a rising stem, cut out the circular center section of the lockout cover (Illustration 4).

One "Valve Handle Lockout Cover" or equivalent, shall be provided; to be used in accordance with NFPA 20, sections 4.17.1 (3) & 4.17.2.
